The Hanse 630e - KAZE - is characterized by its elegance, speed, and excellent standard features, as well as its self-tacking jib and twin rudder. The boat has been completely renovated inside in 2022 with a new clean and minimalist image. Its compact and elegant construction ensures a design that stands out from other models. Of course, the Hanse 630e is beautifully decorated both on deck and below. The cockpit is spacious with the extensive beam of the judel/vrolijk design carried well aft.

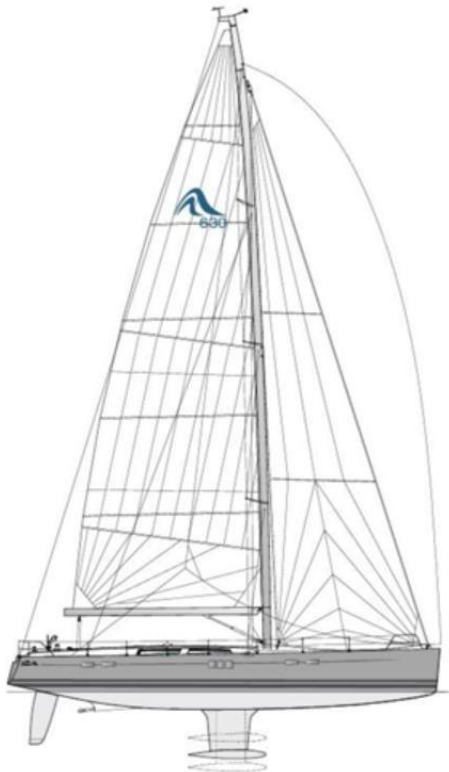

From the twin carbon steering wheels, you will look forward over a huge expanse of teak, with all hatches flush mounted on the deck.

EXTRAS
